On April 23rd, its leaders will meet in Brussels for a euro-summit to discuss how to deal with the persistent refugee crisis. No one is pretending that this will be easy or will be resolved quickly. It is, however, an opportunity to make a break with the past. The world has changed dramatically since 2009, when the crisis took off, but Europe has remained stubbornly closed. It is not ready for the new geopolitical reality. Its leaders claim to respect the European Union's founding treaties, but the reality is that they do not. The real purpose of the European Union is never to be found in those treaties, which are in any case no longer relevant for much of its day-to-day business. The EU is not about peace or prosperity, or to protect freedom. Its only remaining purpose, indeed its *raison d'être*, is to manage crises. That is why most of the European Union's new policies are not about finding a permanent solution for the European crisis. It is about keeping the crisis from spreading. That is why the focus is on border protection. Unlike the United States, Europe lacks a powerful military. It does not have an army and its only meaningful military activity is to provide logistical support to NATO. It has no navy or air force, and its police have as yet no real capacity. It is a continent without an army. But the European Union can still deploy thousands of troops at its borders. And so Europe is doing just that. The Visegrád Group

## What's New In?

**Web Services:** Edit, generate, and export your drawings and your software product in a single click with the new Web Services technology. **Tools and Applications:** Use the technology found in AutoCAD and AutoCAD LT 2013 to help you design with confidence. You can access your software from all of your devices. **Revised 3D Drawing Creation Technology:** Use intelligent new technology to rapidly and accurately create 3D drawings with realistic geometry. A new modeling engine combines the precision of topology technology with the accuracy of Surface technology to create optimal 3D models. **Project Documentation:** Document your work as a powerful, highly-interactive CAD database. Documents include information about your models, equipment, and other key stakeholders. (video: 2:38 min.) **Deployment, Accessibility, and Configuration:** Make your software work smoothly for everyone using your new features and enhancements. Support for almost any platform and assistive technology has been enhanced. **Symmetric Geometry:** Integrate the same method of measurement and calculation into both 2D and 3D drawing projects. **AutoCAD Feature Overview Markup Import and Markup Assist** The Markup Import and Markup Assist technology automatically connects you to a rich, web-based feedback system where you can accept or reject changes to your design before importing those changes to your drawing. This technology eliminates the need to import comments and suggestions manually. It provides a collaborative environment that can be accessed by everyone involved in the design process: users, reviewers, developers, managers, and customers. If you use a revision manager (such as OneNote, MS Project, and DIAGRAM), the Markup Assist technology can use the timeline to automatically import changes to the drawing and incorporate those changes into your drawing. Not only does the Markup Import and Markup Assist technology save time, but it also reduces errors and makes design reviews more efficient. **Web Services** Use the Web Services technology to share designs and reports between your applications and online resources. Instead of switching back and forth between your drawing and the Internet, you can simply save your drawing to a public website and access it later. You can share and access your designs from your smartphone, tablet, or desktop. If you have an Internet connection, you can access your design online, on your mobile device, or even at a coffee shop.
